3 Steamhead Location

Steamhead Location

DO NOT install the steamhead near the seating area or the user.

DO NOT forget to install the steamhead rough-in fitting! **INSTALL** steamhead as far as possible from the in-shower controller. **NEVER** install the steamhead under controller

Install the steamhead 12" from the floor or bathtub rim and 6" from any corner.

Steamhead is to be mounted as far as possible from typical bathing position (seated or standing) and installed as far from the in-shower controller as possible.

A i. For retrofit to existing finish wall:

Drill a 2-1/2" diameter hole in the shower wall or wall above bathtub rim for the steam outlet rough-in fitting and install to be flush with the finished wall. (plumbing must be done from backside of finished space)

ii. For new framing: Mount and install rough-in fitting to be flush with finished wall.

B Connect a 1/2" NPT brass pipe or copper tubing to the steam outlet union (not included) on the generator running the pipe to the steam head location in the wall to connect with the steamhead rough-in. For PRO-650 and PRO-850 run 3/4" copper steam line. It is very important that the pipe is firmly secured to the wall, so that when the steamhead is installed it doesn't push the rough-in fitting back into the wall. Install a 1/2" drop-ear elbow on the end of the 1/2" pipe or tubing for the rough-in fitting. For all the connections, use solder for copper joints and Teflon tape for pipe fittings and do not over tighten fittings. **DO NOT USE PVC CEMENT.**

For detail installation instructions of the steamhead please see Installation section in thermasol.com/customersupport

Upon final installation mount steamhead with  facing up to allow aromatherapy well to dispense steam.

4 Steamhead Installation

- A** When finalizing installation, install the steamhead into the housing, making sure that the aromatherapy fill channels  are facing upwards.
- B** To ensure that no moisture gets behind the steamhead and into the wall, place a generous bead of waterproof silicone around the steamhead, using the machined groove (located on the back of the steamhead) as a guide.
- C** Be sure there isn't any debris within the housing, and that the two O-rings are in place on the steamhead.
- D** Press the steamhead into the housing until the steamhead is tight against the finished wall. You may need to wipe away any excess silicone.
